

## CMI Enterprises Upholstery Vinyl Disinfectant Update

CMI has been dedicated to supplying Vinyl Upholstery products with next generation biocides and coatings to help protect the seating from bacteria. During these unprecedented times with the Corona Virus, we offer the following cleaning and disinfectant information for our CMI seating vinyls.

Coronaviruses are what are called enveloped viruses, "meaning they are one of the easiest types of viruses to kill with the appropriate disinfectant product," the EPA says. "Using the correct disinfectant is an important part of preventing and reducing the spread of illnesses".

The Centers for Disease Control and Prevention says that for "disinfection, diluted household bleach solutions, should be effective.

CMI approves the use of a 1:10 bleach and water dilution as recommended by both the CDC and the EPA on all of our upholstery vinyls

The EPA recently posted a list of the Registered Antimicrobial Products for use against the Novel Coronavirus SARS-Cov-2, the cause of Covid-19. Information regarding these products can be found on the EPA Website at this location [EPA's website](#).

The following products on the EPA list have been previously approved for use on all CMI Upholstery vinyls.

***10% Bleach 1:10 Dilution with water***

***Super Sani Cloths***

***Virex II 256***

***Virex Original***

### **Important Notes:**

Cleaners and disinfectants should be used at the manufacturers recommended dilutions and never in a concentrated form.

After each application disinfectants must be wiped off with clean water and dried with a clean towel to remove any chemical residue that could discolor or degrade the material surface.
